

IDEA lab

a laboratory for informatics
development, experimentation & applications

user pull

- health, biology
- linguistics, economics, education
- geosciences, engineering
- physics, chemistry
- sociology, economics
- music, literature, theology ...

technology push

- information retrieval - text mining
- data management - data wiki
- process modelling, simulation and analysis
- pattern-recognition and machine learning
- sensing, planning and control
- parallel and distributed computation
- social collaboration

IDEA lab

informatics

development experimentation applications

- open community
- research meets application
- proof-of-principle prototyping
- *quick and clean* – informed development
- open-source open-data open-innovation

get involved
