

Adequacy and Fluency	4 Fluency and Adequacy: Scales 5
Human judgement	
 given: machine translation output given: source and/or reference translation task: assess the quality of the machine translation output Metrics Adequacy: Does the output convey the same meaning as the input sent Is part of the message lost, added, or distorted? Fluency: Is the output good fluent English? This involves both grammatical correctness and idiomatic word choice 	1 none 1 incomprehensible
	Philipp Koehn Machine Translation: Evaluation 26 September 20 6 Hands On: Judge Translations 7
You have already judged 14 of 3064 sentences, taking 86.4 seconds per sentence.	 Rank according to adequacy and fluency on a 1-5 scale (5 is best) Source: L'affaire NSA souligne l'absence totale de débat sur le renseignement

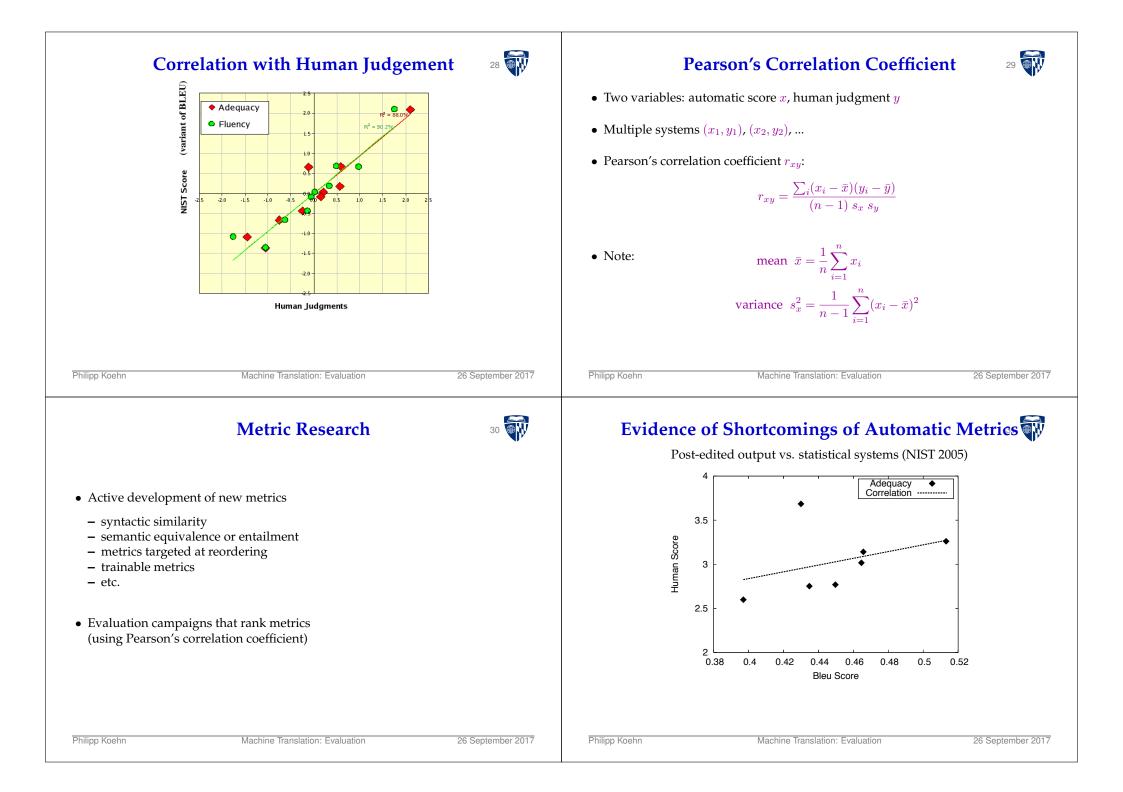

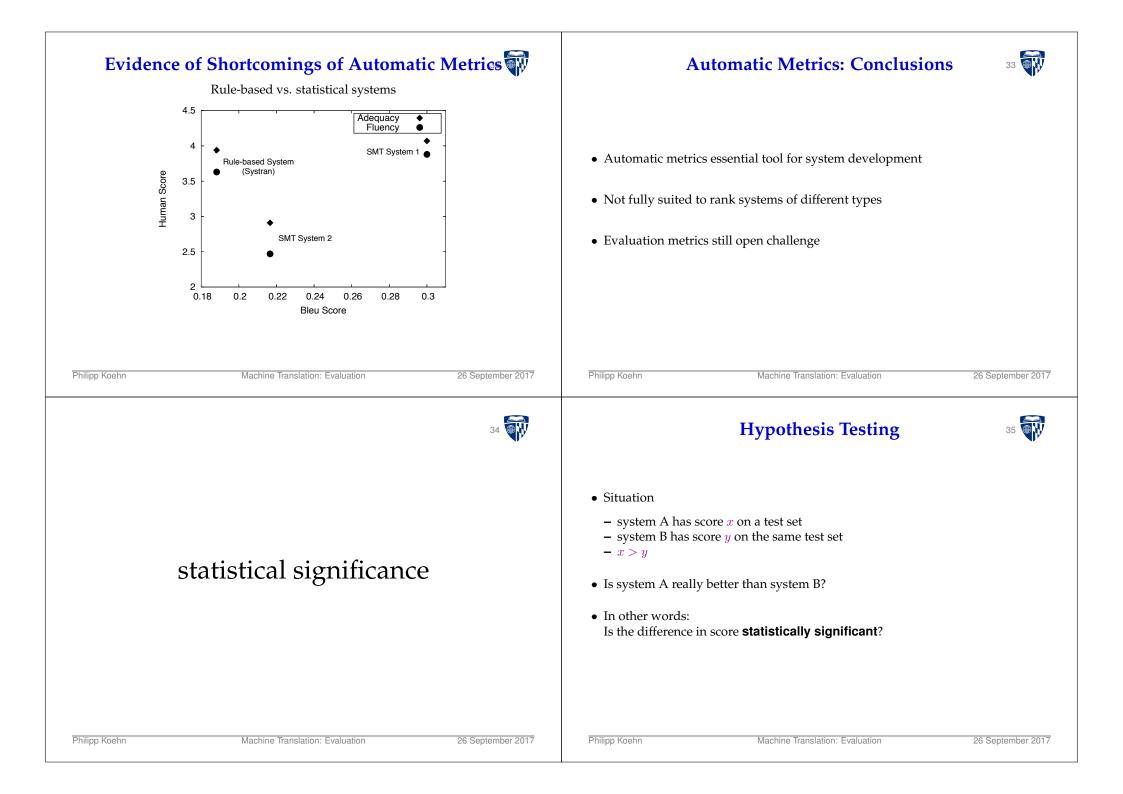

Ranking Translations	12	Ways to Improve Consistency			
• Task for evaluator: Is translation X better than translation Y? (choices: better, worse, equal)		Evaluate fluency and adequacy separatelyNormalize scores			
• Evaluators are more consistent: Evaluation type P(A) P(E) K Fluency .400 .2 .250 Adequacy .380 .2 .226 Sentence ranking .582 .333 .373		 use 100-point scale with "analog" ruler normalize mean and variance of evaluators Check for bad evaluators (e.g., when using Amazon Turk) repeat items include reference include artificially degraded translations 			
Philipp Koehn Machine Translation: Evaluation 2 Goals for Evaluation Metrics	26 September 2017 14	Philipp Koehn Machine Translation: Evaluation 26 September Other Evaluation Criteria 15			
.ow cost: reduce time and money spent on carrying out evaluation Tunable: automatically optimize system performance towards metric Meaningful: score should give intuitive interpretation of translation of	2	 When deploying systems, considerations go beyond quality of translations Speed: we prefer faster machine translation systems Size: fits into memory of available machines (e.g., handheld devices) Integration: can be integrated into existing workflow Customization: can be adapted to user's needs 			

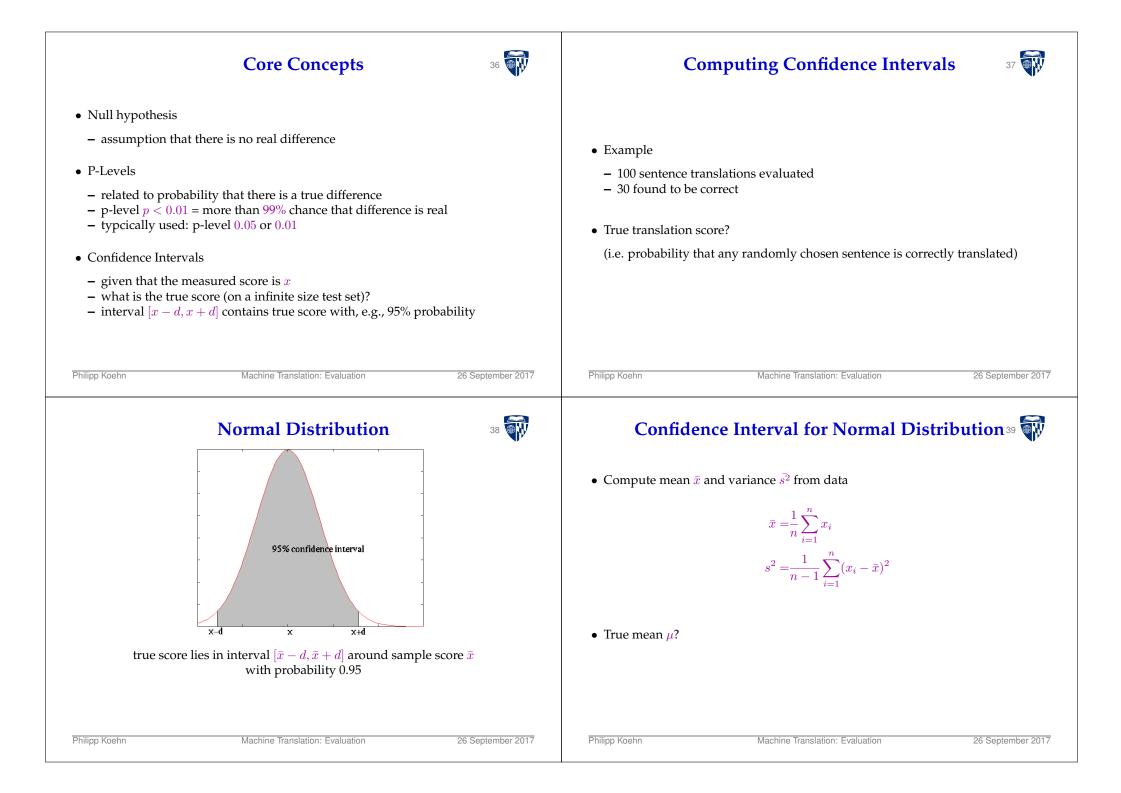

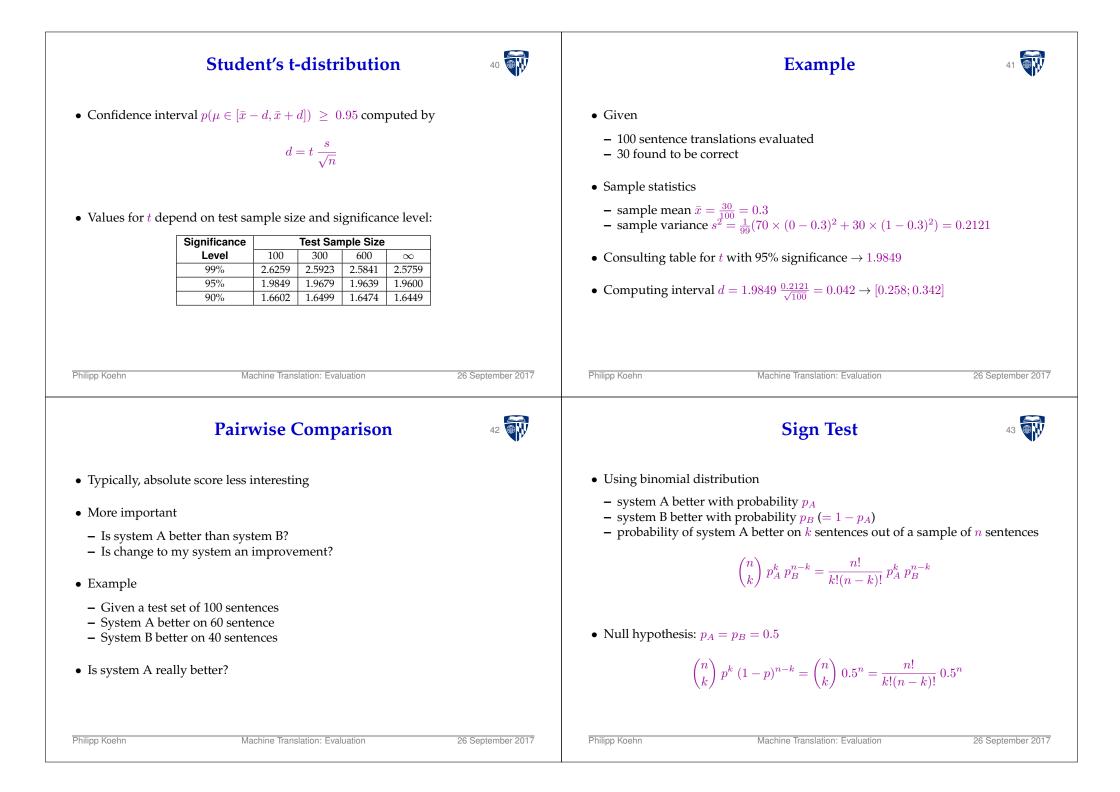

45 44 **Examples Bootstrap Resampling** • Described methods require score at sentence level p < 0.01 $p \le 0.05$ p < 0.10n5 k = 5= 1.00-• But: common metrics such as BLEU are computed for whole corpus _ 10 $\frac{k}{2} = 1.00$ k > 9k > 0.90k > 9k = 10 $\frac{k}{m} \ge 0.90$ 20 $\frac{k}{2} > 0.85$ $k \ge 15$ k > 17 $\frac{k}{2} > 0.75$ $k \ge 15$ $\frac{k}{2} > 0.75$ • Sampling 50 $k \ge 32$ k > 35> 0.70k > 33> 0.66 \underline{k} > 0.641. test set of 2000 sentences, sampled from large collection 100 $k \ge 64$ > 0.64 $k \ge 61$ > 0.61k > 59> 0.592. compute the BLEU score for this set 3. repeat step 1–2 for 1000 times 4. ignore 25 highest and 25 lowest obtained BLEU scores Given *n* sentences \rightarrow 95% confidence interval system has to be better in at least *k* sentences to achieve statistical significance at specified p-level • Bootstrap resampling: sample from the same 2000 sentence, with replacement 26 September 2017 Philipp Koehn Philipp Koehn Machine Translation: Evaluation Machine Translation: Evaluation 26 September 2017 46 **Task-Oriented Evaluation** ٩. • Machine translations is a means to an end • Does machine translation output help accomplish a task? other evaluation methods • Example tasks - producing high-quality translations post-editing machine translation - information gathering from foreign language sources Philipp Koehn Machine Translation: Evaluation 26 September 2017 Philipp Koehn Machine Translation: Evaluation 26 September 2017

48

- Measuring time spent on producing translations
 - baseline: translation from scratch
 - post-editing machine translation

But: time consuming, depend on skills of translator and post-editor

- Metrics inspired by this task
 - TER: based on number of editing steps Levenshtein operations (insertion, deletion, substitution) plus movement
 - HTER: manually construct reference translation for output, apply TER (very time consuming, used in DARPA GALE program 2005-2011)
