Advanced Topics in Foundations of Databases, 2017/18

Material for Final Project and Essays

The references are taken from DBLP (http://dblp.uni-trier.de), the main bibliographical source for computer science research. You can search DBLP by authors' names, to find those papers. Once they are found, clicking on the electronic edition icon next to the paper gives you access to the source, as long as you are accessing the site from the UoE network (it will *not* work elsewhere). If for an occasional paper it does not work (there should be very few exceptions, if any), try entering the title, in quotes, as well as pdf in a google search, and you should find copies on authors' webpages.

Topic 1: Foundations of Relational Query Languages

1. Ashok K. Chandra, Philip M. Merlin: Optimal Implementation of Conjunctive Queries in Relational Data Bases. STOC 1977: 77-90

2. Martin Grohe: From polynomial time queries to graph structure theory. Commun. ACM 54(6): 104-112 (2011)

3. Martin Grohe: Fixed-point definability and polynomial time on graphs with excluded minors. Journal of the ACM 59(5): 27 (2012)

4. Neil Immerman: Languages that Capture Complexity Classes. SIAM J. Comput. 16(4): 760-778 (1987)

5. Phokion G. Kolaitis, Moshe Y. Vardi: Conjunctive-Query Containment and Constraint Satisfaction. J. Comput. Syst. Sci. 61(2): 302-332 (2000)

6. Leonid Libkin: The finite model theory toolbox of a database theoretician. PODS 2009: 65-76

7. Leonid Libkin: Expressive power of SQL. Theor. Comput. Sci. 296(3): 379-404 (2003)

8. Moshe Y. Vardi: The Complexity of Relational Query Languages (Extended Abstract). STOC 1982: 137-146

9. Christos H. Papadimitriou, Mihalis Yannakakis: On the Complexity of Database Queries. J. Comput. Syst. Sci. 58(3): 407-427 (1999)
